

## Preverde boundary fence

The Preverde Boundary Fence is a modular boundary fence for use within the Preverde prefab garden system. The boundary fence can be designed as a fence or as a pre-vegetated hedge, matching the design and desired layout.

| Height      | 180-200cm                                                                                                                                |

## Details & application

The Preverde Boundary Fence forms a clear and well-kept boundary of the garden and can be used as a partition between plots, gardens or other outdoor spaces. Due to the modular construction, the boundary fence can be tailored to the layout, dimensions and appearance of the Preverde garden. There is a choice of a traditional fence or a directly pre-vegetated hedge, depending on the desired degree of screening and the appearance of the project.

The boundary fence is standard with a height of 180–200 cm. When used as a pre-cultivated hedge, you can choose from *Taxus baccata*, *Prunus laurocerasus* 'Genolia', *Hedera hibernica*, *Trachelospermum jasminoides*, *Fagus sylvatica* and *Ligustrum ovalifolium*. This allows an appropriate combination of structure, height and greenery to be chosen for each project.

The boundary fence is in line with the modular structure of the Preverde system and can be included as part of the total garden layout. The placement and implementation can be tailored to the plot boundaries, the desired privacy and the further layout of the garden. This creates an integrated boundary fence that can be used both functionally and as part of the garden design.
