

Preverde edge trim

The Preverde Edge Finish is a finish for the edges of the Preverde prefab garden system. The implementation is tailored to the design and the desired appearance of the project.

Technical specifications

Detail	Value
Types	Gravel / Peridot / Cocoa shells / Peach kernels / Wood chips / Seeds
Dry weight	Depending on chosen edge finish

Details & application

The Preverde Edge Finish forms the finish along the edges of the Preverde system structure and ensures a neat, neat and functional transition to the surrounding pavement, surface or other furnishing elements. The edge finish helps to clearly frame the system structure visually and can be tailored to the materialization and appearance of the project.

Depending on the design and application, the edge can be made with different materials. Available versions are gravel, olivine, cocoa shells, peach pits, wood chips and seeds. The chosen finish can be matched to the surrounding materials and the desired appearance of the garden. This allows the transition between the Preverde system structure and the environment to be completed in a simple and uniform way. The edge finish is applied in accordance with the design and the current assembly and processing instructions of Preverde.
