

Preverde pressure distributing cloth

The Preverde Pressure Distribution Cloth is a solid pressure distribution layer for application within the Preverde prefab garden system. The fabric is installed under the system structure and ensures an even distribution of loads over the substrate.

Technical specifications

Detail	Value
Material	100% recycled polyester
Dry weight	1000 g/m ²

Details & application

The Preverde Pressure Distribution Cloth is made from 100% recycled polyester and has a high mass per unit area for a sturdy and durable design. The fabric is used as the bottom layer of the Preverde system structure and forms a protective and pressure-distributing layer between the system structure and the substrate. By distributing loads over a larger surface, the fabric contributes to a stable and even load on the substrate. The strips are applied with a minimum of 100 mm overlap for a continuous layer.
